

Honorable Mayor and Members
of the Ad Hoc Web Redesign
City Council Committee
City Hall
Torrance, California

Members of the Committee:

SUBJECT: City Manager – Citywide Website Redesign II (CWR-II) Project.
APPROVED EXPENDITURE: \$276,460.00

RECOMMENDATION

Recommendation of the Cable and Community Relations Manager that the Ad Hoc City Council Committee concur with the Citywide Web ReDesign Team recommendation of number three conceptual wireframe redesign for the City's website.

Funding is approved in FEAP 842.

BACKGROUND

Each member of the Citywide Web ReDesign Team completed a separate planning and graphic design survey. Each member survey was analyzed collectively by Vision Internet. Vision also added a code to our existing homepage to generate heat-maps that visually illustrates what parts are clicked to access information, red being most used. Vision also used Google Analytics to identify what pages are accessed, how often, and how many times during 2015. Vision also conducted a resident exercise to observe interaction with the current website. Based on these four tools, Vision created three conceptual wireframe designs to consider and presented them for discussion and input during a workshop with the ReDesign Team.

ANALYSIS

The Citywide Web ReDesign Team and Vision Internet Team met in a workshop to review the timeline, discuss components and specification, domains and hosting, third party vendors and applications currently used on the site, content migration sitemap creation, and user worksheets, user experience presentation and study results, review and discussion of homepage layout wireframe, and graphic design options.

The desired features expressed by the Ad Hoc Committee and affirmed by the City Council are incorporated in these three designs.

The following objectives were issued by the City Council:

- 1) Create visually attractive pages on the Torrance website showcasing information aimed at local community members.
- 2) Adopt a user-centric approach throughout, particularly in site architecture and content that speaks in the visitor's language and offers relevant information with fewer click-throughs.

- 3) Create and implement a search engine optimization strategy that uses best practices in design and content.
- 4) Maximize site usability through current web design and development best practices – relevant content, useful functionality, and a high degree of interactivity.
- 5) Increase amount of visitor "quality time" on the website by inter-linking relevant content to increase click depth.
- 6) Explore valuable functionality that will keep the user engaged and foster long-term relationships.

The Committee previously discussed and expressed an overall desire for the website to include a new look and feel that markets the city, features activities, and welcomes the community to easily locate information.

The three conceptual designs presented by Vision Internet provide for a variety of paths to identify and locate information. The designs feature search, news, and combination of the two. The layouts provide a balance of information and design to market Torrance in a effective and efficient manner. After careful consideration and including a few modifications to the design presented, the ReDesign Team determined design number three best met the goals as stated and approved by the City Council.

Attached is the development process and timeline goals, along with wireframe conceptual designs.

Respectfully submitted,

LeROY J. JACKSON
CITY MANAGER
